

The future of fueling has arrived.

Computrol FuelCloud was built by fuel jobbers with fuel jobbers in mind. The FuelCloud Captive Site System is designed to enable distributors to install a number of captive site systems for the cost of an enterprise system. Let FuelCloud help you retain customers in an increasingly competitive and demanding industry, grow your business in a simpler and more rapid way than ever before, and leverage technology to increase efficiency and add to your bottom line.

DO MORE FOR LESS

FuelCloud is designed as a friendly and simple alternative to more expensive and sophisticated proprietary systems. For the cost of one traditional card reader system, you can deploy multiple FuelCloud systems

SIMPLE TO INSTALL, SIMPLE TO USE

FuelCloud is modularly built to be installed in minutes on virtually any kind of tank system and to be used by drivers and CPAs alike

STAND-ALONE OR FULLY INTEGRATED

Our system is made to be managed and can be run entirely stand-alone or integrated and exported directly into your existing off-the-shelf back office and/or proprietary software

DATA IS THE FUTURE

The FuelCloud reporting module provides functionality for both customers and fuel jobbers to view and print custom reports and data is available for export 24/7

CONTROL INVENTORY AND TRACK COSTS

FuelCloud lets you track the volume and cost of everything coming in and going out of a tank. Products, quantities, and even the time of day that tanks can be accessed can be controlled.

MAXIMIZE EFFICIENCY

The FuelCloud system allows jobbers to monitor tank levels in real time, estimate usage trends, and trigger alerts automatically
